

## 1. High Risk Investments

The trading of Margin Foreign Exchange (FX) and Contract for Difference (CFD) involves high risk and may not be suitable for all investors. Before you decide to open a trading account in Middle Forex and trade all products offered by Middle Forex, you should carefully consider your investment objectives, financial situation and trading experience. Middle Forex is registered by BAPPEBTI Financial Services Regulator(SPA No:1519 BAPPEBTI/sp/4/2007).

Middle Forex will investigate your employment status, investment objectives , financial situation , etc. when you opening an account, please make sure your feedback information real. When trading Margin FX and CFD , risks that may arise includes loss of some or all of your deposited funds, therefore, you should not attend this speculative trading activities by using the money which you cannot afford to lose. If you insist on opening an account in Middle Forex and attend the above transactions , which means that you default

know all risks of margin transactions. You need to mentally prepare for all possible market risks, Middle Forex does not bear any responsibility for loss caused by market risks. For opening the account and trading activities, Middle Forex suggests that you can seek advice from an independent financial adviser or do enough self risk assessment.

## 2. Network Transaction Risk

There is a certain degree of risks in network trading system, which includes, but not limited to, hardware failure and software failure of computer or mobile terminal, and network connectivity issues.

Because Middle Forex cannot control the following issues, i.e., strength and reception of connection signals, router line, configuration of your equipment or reliability of network connection of your devices, Middle Forex will not bear any responsibility for communication failures , misrepresentation or delays in the network transactions.

3. Middle Forex does not bear any responsibility for the following transaction risks caused by transient and sharp market fluctuations, i.e., pending orders ( including pending orders to buy and sell ) , and preset stop-loss and profit order which cannot be triggered on absolutely accurate point!

The straight-through STP trading patterns is used in Middle Forex, Middle Forex only seek trading counter-party for clients, Middle Forex does not actively or passively undertake any transaction orders of clients, all orders of clients will enter into inter-bank market. Due to time difference and restriction of large market transaction flow and client network transaction environment, Middle Forex can not guarantee that all pending orders and preset stop-loss and profit order are triggered on the point which is preset by the clients. This means that there may be differences between final sale point and preset point for clients pending orders , preset stop-loss order and profit order. Because in the straight-

trading environment , the implementation of principle of the whole large market trading instructions is to follow the " price priority & time priority ". The amount of transaction on the best price is often limited when transient and sharp market fluctuations is occurring, which may lead to differences between final sale point and preset point for clients pending orders , preset stop-loss order and profit order. As a straight-through brokers , Middle Forex does not bear any responsibility for this normal market risk. If you insist on opening a trading account and trading in Middle, you need to acknowledge the existence of the above normal risks and voluntarily bear all responsibility for market risk, otherwise Middle Forex will not pass your account application.

Important economic data ( including, but not limited to, USA non-agricultural data , Fed interest rate decision on behalf of the world's central banks , GDP and CPI data and PMI and employment data of countries around the world and etc. ) or major events ( including, but not limited to, sudden war , major

political and economic events ) often lead to transient and sharp market fluctuations. In view of the above explanation about the STP pattern of Middle Forex, Middle Forex also will not bear any responsibility for trading losses caused by transient and sharp market fluctuations caused by data or major events. Especially for pending orders ( including pending orders to buy and sell ) and instruction order of preset stop-loss and profit before important economic data or major events, Middle Forex can not guarantee that these pending orders and instruction order of preset stop-loss and profit will be triggered on the point which is preset by the clients, Middle Forex does not bear any responsibility for results of loss, loss increase or reduction profit caused by this normal market risk. If you insist on opening a trading account and trading in Middle Forex, you need to acknowledge the existence of the above normal risks and voluntarily bear all responsibility for market risk, otherwise Middle Forex will not pass your account application.

4. Burst ratio cannot be used as a stop-loss, because burst ratio cannot be absolutely and precisely executed in special market condition.

According to market research of Middle Forex, some margin trader are not accustomed to set stop-loss, and they hope to achieve rated stop by using burst ration provided by dealer. But in fact, burst ratio cannot be absolutely and precisely executed in some special market condition, especially for STP trader like Middle Forex. We can not guarantee that all orders of clients are executed on the burst ratio released by us ( 30% in current).

Because in special market condition, especially transient and sharp market fluctuations caused by important economic data ( including, but not limited to, USA non-agricultural data , Fed interest rate decision on behalf of the world's central banks , GDP and CPI data and PMI and employment data of countries around the world and etc. ) or major events ( including, but not limited to, sudden war , the major

political and economic events ), there is no guarantee for STP pattern to execute absolutely and precisely 30% burst ratio, which means that client order will be liquidated after the margin ration under 30%. This is normal risk decided by STP pattern. Therefore, Middle Forex does not bear any responsibility for loss or loss increase of clients caused by this risk, either.

For the loss caused by the above risk, Middle Forex does not bear any responsibility, or assume any compensation obligations. Middle Forex will only provide single client with only one positive subsidies for some special cases, the maximum amount of the positive subsidies does not exceed \$ 500 . The decision whether positive subsidies is provided for special clients in special condition is completely determined by Middle Forex.

5. The characteristics of STP trading pattern of Middle Forex are as follows : in this pattern, there is no conflict of interest between clients and Middle Forex, therefore, the account balance of the funds has high

security ; in this pattern, all the orders will enter into the large market to find trade counter-party. Time and price difference may be exist, rather than transaction being done on absolute and precise point, the condition may be more prominent when market is influenced by data or event.

6. Middle Forex does not offer valet trader service. The loss caused by trading strategies service and valet trader service provided by any third party individuals or organizations has nothing to do with Middle Forex, Middle Forex does not bear any responsibility for this. Meanwhile , all client service staffs in Middle Forex are prohibited to provide clients with making decision ( i.e., trading strategy ) and valet trader service. If clients insists on demanding and choosing the above services provided by the server who may be violation the regulation, and loss is caused by the above reasons, Middle Forex will not bear any responsibility.
